

**IN THE CLAIMS:**

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

1. (Currently Amended) A Web server for transmitting a Web page via a network, comprising:
  - an operation portion determining an entire or a-part of contents of ~~a-the~~ the Web page in accordance with a parameter designated by a user;
  - a contents information process portion making a storage portion store the entire or a-part of the contents of the Web page determined by the operation portion in accordance with the parameter designated by the user in connection with Web page identifying information ~~for-on~~ on the Web page and user identifying information ~~for-on~~ on the user;
  - a Web page generation portion generating ~~a-the~~ the Web page in accordance with the entire or a-part of the contents of the Web page determined by the operation portion;
  - a Web page transmission portion transmitting the Web page generated by the Web page generation portion to a the terminal device of the user ~~who designated the parameter relating to the Web page;~~
  - a designation reception portion receiving, from an administrator, designation of the Web page identifying information and the user identifying information;
  - a contents information extraction portion ~~extracting~~ extracting, from the storage portion portion, the entire or a-part of the contents corresponding to the Web page identifying information and the user identifying information both of which ~~relate to the received designation are designated by the administrator;~~
  - a Web page regeneration portion regenerating ~~a-the~~ the Web page in accordance with the entire or part of the contents extracted by the contents information extraction portion; and
  - a regenerated Web page transmission portion transmitting the Web page regenerated by the Web page regeneration portion to a terminal device of the administrator ~~who designated the Web page identifying information for the Web page.~~
2. (Currently Amended) A ~~The~~ The Web server according to claim 1, wherein the Web page generation portion generates the Web page in accordance with only necessary contents information among the contents information, and

the contents information process portion makes the storage portion store only the contents information used by the Web page generation portion among the contents information.

3. (Cancelled)

4. (Currently Amended) A Web server having a function of a Java servlet for transmitting a Web page via a network, comprising:

a business logic unit determining an entire or a-part of contents of ~~a-the~~ Web page in accordance with a parameter designated by a user;

a contents information process logic unit making a storage portion store the entire or a ~~part-part~~ of the contents of the Web page determined by the business logic unit in accordance with the parameter designated by the user in connection with Web page identifying information ~~for-on~~ the Web page and user identifying information ~~for-on~~ the user;

a screen generating logic unit generating ~~a-the~~ Web page in accordance with the entire or a part of the contents determined by the business logic unit;

a Web page transmission logic unit transmitting the Web page generated by the screen generating logic unit to a ~~the-terminal~~ device of the user ~~who-designated-the-parameter-relating-to-the-Web-page~~;

a designation reception logic unit receiving, from an administrator, designation of the Web page identifying information and the user identifying information; and

a replay logic unit regenerating a Web page in accordance with the entire or a-part of the contents that is stored in the storage portion and corresponds to the Web page identifying information and the user identifying information both of which ~~relate-to-the-received-designation~~ are designated by the administrator to transmit the regenerated Web page to a terminal device of the administrator.

5. (Currently Amended) A ~~The~~ Web server having a function of a Java servlet according to claim 4, wherein the screen generating logic unit generates the Web page in accordance with only necessary contents information among the contents information, and the contents information process logic unit makes the storage portion store only the contents information used by the screen generating logic unit among the contents information.

6. (Cancelled)

7. (Currently Amended) A computer-readable storage medium storing a program for use in a computer that has a function of a Java servlet for transmitting a Web page via a

network, the program ~~making which when executed by a computer causes the computer to execute the a~~ process comprising:

generating a Web page with only contents information necessary for generating the Web page among an entire or a-part of the contents of the Web page determined by a business logic unit in accordance with a parameter designated by a user;

transmitting the generated Web page to a terminal device of the user ~~who designated the parameter relating to the Web page;~~

storing only the necessary contents information among the entire or a-part of the contents for generating ~~a-the~~ Web page in connection with Web page identifying information ~~for-on~~ the Web page and user identifying information ~~for-on~~ the user ~~who designated the parameter relating to the entire or a-part of contents;~~

receiving, from an administrator, designation of Web page identifying information and user identifying information;

extracting the entire or a-part of the contents corresponding to the Web page identifying information and the user identifying information both of which ~~relate to the received designation are designated by the administrator;~~

regenerating a Web page in accordance with the contents extracted by the extracting;  
and

transmitting the regenerated Web page to a terminal device of the administrator ~~who designated the Web page identifying information for the Web page.~~

8. (Currently Amended) A computer-readable storage medium storing a program for use in a computer ~~that transmits to transmit~~ a Web page via a network, the program ~~making which when executed by a computer causes the computer to execute the a~~ process comprising:

determining an entire or a-part of the contents of ~~a-the~~ Web page in accordance with a parameter designated by a user;

storing contents information indicating the entire or a-part of the contents of the Web page determined in accordance with the parameter designated by the user in connection with Web page identifying information ~~for-on~~ the Web page and user identifying information ~~for-on~~ the user;

generating ~~a-the~~ Web page in accordance with the determined entire or a part of contents;

transmitting the generated Web page to a terminal device of the user ~~who designated the parameter relating to the Web page;~~

receiving, from an administrator, designation of the Web page identifying information and the user identifying information;

extracting the entire or ~~a-part of~~ the contents corresponding to the Web page identifying information and the user identifying information both of which ~~relate to the received designation~~ are designated by the administrator;

regenerating ~~a-the~~ Web page in accordance with the contents extracted by the extracting; and

transmitting the regenerated Web page to a terminal device of the administrator-~~who designated the Web page identifying information for the Web page.~~

9. (Currently Amended) A method for transmitting a Web page via a network, comprising:

determining an entire or a part of contents of a Web page in accordance with a parameter designated by a user;

storing contents information indicating the entire or ~~a-part of~~ the contents of the Web page determined in accordance with the parameter designated by the user in connection with Web page identifying information ~~for on~~ on the Web page and user identifying information ~~for on~~ on the user;

generating ~~a-the~~ Web page in accordance with the determined entire or ~~a-part of~~ the contents;

transmitting the generated Web page to a terminal device of the user-~~who designated the parameter relating to the Web page~~;

receiving, from an administrator, designation of the Web page identifying information and the user identifying information;

extracting the entire or ~~a-part of~~ the contents corresponding to the Web page identifying information and the user identifying information both of which ~~relate to the received designation~~ are designated by the administrator;

regenerating ~~a-the~~ Web page in accordance with the contents extracted by the extracting; and

transmitting the regenerated Web page to a terminal device of the administrator-~~who designated the Web page identifying information for the Web page.~~

10. (New) A Web server for transmitting a Web page via a network, comprising:  
an operation portion determining an entire or part of contents of the Web page in accordance with a parameter designated by a user;

a contents information process portion making a storage portion store the entire or part of the contents of the Web page in connection with Web page identifying information on the Web page, user identifying information on the user and date-and-time specifying information

specifying date-and-time when the entire or part of the contents is determined by the operation portion;

a Web page generation portion generating the Web page in accordance with the entire or part of the contents of the Web page determined by the operation portion;

a Web page transmission portion transmitting the Web page generated by the Web page generation portion to a terminal device of the user;

a designation reception portion receiving, from an administrator, designation of the Web page identifying information, the user identifying information and a period of time;

a contents information extraction portion extracting, from the storage portion, the entire or part of the contents corresponding to the Web page identifying information, the user identifying information and date-and-time falling within the period of time all of which are designated by the administrator;

a Web page regeneration portion regenerating the Web page in accordance with the entire or part of the contents extracted by the contents information extraction portion; and

a regenerated Web page transmission portion transmitting the Web page regenerated by the Web page regeneration portion to a terminal device of the administrator.
